

Engine number guide

 **Perkins®**

THE HEART OF EVERY GREAT MACHINE

Understand your engine plate

Know the parts you need for your engine

Over the years Perkins has produced hundreds of different engines and each can have many different variants.

So how do you know the exact specification of your engine? All the information you need about your engine is included in the serial number on your engine plate, which you can use to find the parts to fit on your engine.

Where can I find my serial number?

The engine serial number is on a metal plate attached to the block, typically found on the left-hand side of the engine. The position of the engine plate varies across different engine series. You can find the position of your plate using the table below.

Engine type	Position	Engine type	Position	Engine type	Position
3.152	M	4.41	H	1104D	S

* 850 IOPU serial number is located below the sump on the pedestal bracket

Engine serial number composition

The engine serial number is made up of several components. For example, full engine serial number could be PJ12345U123456P.

The engine serial number is the complete number shown. This is made up of:

- ① the list number or build list, typically 2 to 4 letters followed by 4 or 5 numbers
- ② a letter identifying the country
- ③ a series of numbers showing the build line, also called a serial number
- ④ a letter indicating the year of manufacture

Year of manufacture code

This code indicates the calendar year of manufacture. The letters I,O,Q,R and Z will not be used

Notes

¹ A number of engines were built with the letter 'R' as the year of manufacture code. In the middle of January 2008, the year of manufacture code was changed to the letter 'S'.
If your full engine serial number ends with the letter 'R', Perkins Engines Company Limited will recognise the full engine serial number.
